TACKLING
**ENVIRONMENTAL
IMPACT**
OF FOOTBALL

OBJECTIVES

GOALS intends to improve the environmental impact of football in general, and specific in women and youth football teams. Increasing environmental awareness and promoting more environmentally friendly behaviors is the aim of the project. Therefore, various tools, both practical as organizational, are being designed.

EXPECTED RESULTS

GOALS developpes organizational tools for the three National Football Associations involved - Romanian, Portuguese and Kosovar - to improve their environmental governance. In addition, GOALS will provide an intuitive online tool to support football organizations in the calculation of their carbon footprint. This is an essential first step, to start the change football clubs need a clear idea on their current situation.

GOALS is a project funded by EU Commission through the ERASMUS+ Sport Programme,
Duration of the project: January 2021 - June 2023
